NEW! BLOWSION TILT KIT

BLOWSION TILT KIT

Super Jet, Wave Blaster, Polaris Octane, Rickter, Aftermarket Hulls

PRICE*

Price: Blowsion.com

New for 2015 is the new Blowsion Anti Ventilation Tilt System. Designed, tested and developed with our pro riders for the last year! The result is the most advanced tilt system available. The result is a tilt system that has zero pump ventilation. You can turn the steering nozzle lock to lock with no ventilation creating max pump pressure. The result is faster aerial spins and better bottom end thrust. For 2015 we also beefed up and reinforced the entire system to withstand the abuse todays top level athletes and big bore motors can dish out! The system includes the new roller bearing EZ Pull stainless cable assembly as well as interchangeable stainless compression nozzle rings for adjustable pump pressure and thrust --depending on your motor and riding needs. (additional nozzle rings, compression and exit nozzle diameters are also available).

Designed for the Super Jet, Blaster, Polaris Octane, Rickter and other aftermarket hull purists wanting the extra edge for back flips, barrel rolls, 360's and more. Created in conjunction with our partners at SKAT TRAK, this deluxe kit is install and ride -- no grinding or pump fit nightmares. Includes heavy-duty cable and all installation hardware. Fits all years Yamaha SJ design, Blaster and Octane. (Lever not included in kit -- Blowsion Tilt/Trim levers in stock.) Compatible with the OEM pump or Skat-Trak Magnum Pumps. Over 30-35+degrees of tilt available depending on rear bond line modifications. 83/85mm bore size. Includes thru hull aluminum tube for cable routing. Kits are available for 144mm, 148mm & 155mm/160mm pumps in 6, 12 and 14 vein setups.

NOTE: this assembly can be used in racing applications as a racing trim also (downward angle).

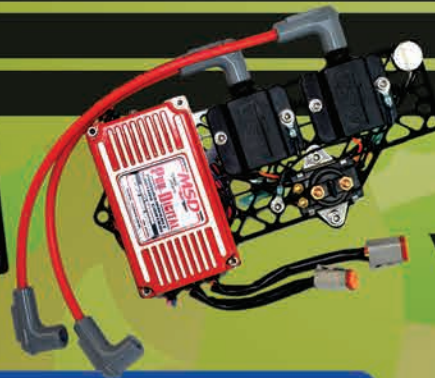

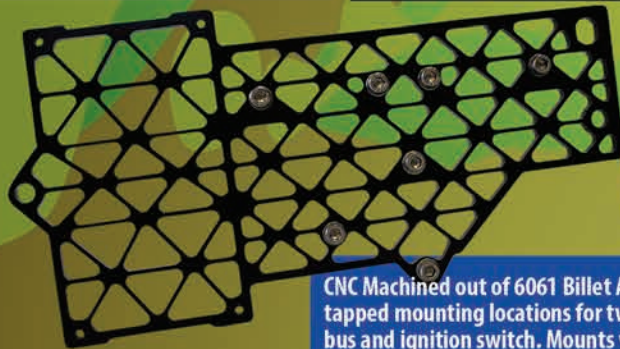

LIGHTWEIGHT BILLET IGNITION PLATE

PLATE FINISH OPTION
